PROFESSIONAL SUMMARY

B.E. in Computer Science (Artificial Intelligence & Machine Learning) student at Vidyavardhaka College of Engineering (VVCE), Mysore, passionate about building production-ready AI systems. Skilled in LLM-powered applications, Agentic AI, Retrieval-Augmented Generation (RAG), and multi-agent architectures. Strong foundation in software engineering, problem-solving, and scalable AI system design with a commitment to continuous learning.

SKILLS

- **Programming Languages** | Python • Java • C • SQL
 - **AI Engineering** | LLMs • Agentic AI • RAG • Prompt Engineering • LangChain • LangGraph • LlamaIndex
 - **Core CS** | Data Structures • Algorithms • OOPS (Java) • Operating Systems • Computer Networks • Machine Learning • Deep Learning • DBMS
 - **Database** | ChromaDB • Supabase • MySQL
 - **Cloud and Tools** | Git • GitHub • AWS Cloud Foundations • CI/CD fundamentals • Docker
-

EDUCATION

- | | |
|---|---------------------|
| • Vidyavardhaka College of Engineering, Mysore,
B.E in CSE(Artificial Intelligence and Machine Learning) | CGPA 9.39 |
| • BGS PU College, Ramanagar, 12th | Percentage 93.33% |
| • Arvind International Residential School, Kunigal , 10th CBSE | Percentage 91.8% |
-

PROJECTS

- **Jarvis AI OS – Production Multi-Agent AI Assistant**
 - Built a production-ready AI assistant powered by multiple AI agents for intelligent task automation and productivity. Integrated RAG, MCP, long-term memory, voice interaction, and tool calling to enable context-aware assistance. Designed using a scalable multi agent architecture for seamless workflow execution.
 - **NeuroNet AI – Multi-Agent Communication Intelligence System (Team of 4)**
 - Developed an AI-powered platform to analyze communication patterns, sentiment, and workflow efficiency using NLP techniques. Leveraged multi-agent collaboration to generate actionable insights for improved team communication. Designed with a privacy-first approach for secure data analysis.
 - **Neural Workspace – AI Development Environment**
 - Built an AI-powered development workspace for coding, project planning, documentation, and software design. Integrated multiple AI agents, terminal automation, and long-term memory for context-aware development workflows. Designed to enhance developer productivity through intelligent automation.
